

SkyCoin444 v10 - Complete Setup Instructions

What You Have

A **production-ready fintech super-app** with:

- 18 fully functional feature pages
 - Real-time WebSocket integration
 - ML-based price predictions
 - Advanced error handling
 - Professional dark theme UI
 - Responsive design
 - All dependencies configured
-

Quick Start (5 Minutes)

Step 1: Extract the ZIP

Bash

```
unzip skycoin444_v10_complete.zip  
cd skycoin444_v10_live
```

Step 2: Install Dependencies

Bash

```
pnpm install  
# or  
npm install
```

Step 3: Setup Environment

Bash

```
# Copy example env file
cp .env.example .env.local

# Edit with your configuration
nano .env.local
```

Step 4: Setup Database

Bash

```
# Generate and apply migrations
pnpm drizzle-kit generate
pnpm drizzle-kit migrate
```

Step 5: Start Development Server

Bash

```
pnpm dev
```

Step 6: Access the Application

- Frontend: <http://localhost:5173>
- Backend: <http://localhost:3000>
- WebSocket: <ws://localhost:3000/ws>

Environment Variables

Create `.env.local` with these variables:

Plain Text

```
# Database
DATABASE_URL=mysql://user:password@localhost:3306/skycoin444

# OAuth (Manus )
VITE_APP_ID=your_app_id
OAUTH_SERVER_URL=https://api.manus.im
VITE_OAUTH_PORTAL_URL=https://oauth.manus.im
JWT_SECRET=your_jwt_secret
```

```
# Optional: Stripe (for payments )
STRIPE_SECRET_KEY=sk_test_...
STRIPE_PUBLIC_KEY=pk_test_...

# Optional: LLM (for AI features)
OPENAI_API_KEY=sk-...

# Optional: Analytics
VITE_ANALYTICS_ENDPOINT=https://analytics.example.com
VITE_ANALYTICS_WEBSITE_ID=your_site_id
```

Database Setup

Option 1: Local MySQL

Bash

```
# Install MySQL
brew install mysql # macOS
# or
sudo apt-get install mysql-server # Linux

# Start MySQL
mysql.server start

# Create database
mysql -u root -p
CREATE DATABASE skycoin444;
EXIT;

# Update DATABASE_URL in .env.local
DATABASE_URL=mysql://root:password@localhost:3306/skycoin444
```

Option 2: Docker

Bash

```
docker run --name skycoin-mysql \
  -e MYSQL_ROOT_PASSWORD=password \
  -e MYSQL_DATABASE=skycoin444 \
  -p 3306:3306 \
  -d mysql:8.0
```

Option 3: Cloud Database

- PlanetScale (MySQL compatible)
 - Vercel Postgres
 - Supabase
 - AWS RDS
-

Testing

Run Type Checking

Bash

```
pnpm check
```

Run Tests

Bash

```
pnpm test
```

Build for Production

Bash

```
pnpm build
```

Deployment

Option 1: Manus Platform (Recommended)

Bash

```
# Create checkpoint
git add .
git commit -m "SkyCoin444 v10 Official Beta v4"

# Push to GitHub
```

```

Features Overview

Core Features (4)

- **Trading Dashboard** - Real-time charts, order book, execution
- **AI Copilot** - Market analysis, sentiment scoring, suggestions
- **Social Feed** - AI-ranked posts, engagement, tipping
- **Analytics** - Portfolio tracking, asset allocation, volume

Advanced Features (7)

- **Messaging** - Real-time chat with tipping
- **Leaderboard** - Multi-category rankings
- **Onboarding** - 8-step progression with XP
- **Referrals** - Tier-based system with rewards
- **API Vault** - API key management
- **Cold Storage** - Time-locked vaults with yields
- **Settings** - User preferences & security

Innovative Features (4)

- **DAO Governance** - Community voting

- **Quantum Vault** - Quantum-safe cryptography
- **AI Wealth** - Autonomous optimization
- **Cross-Chain Bridge** - Multi-chain transfers

Gamification (3)

- **Achievements** - Badges and XP system
 - **Notifications** - Real-time alerts
 - **Portfolio** - Advanced analytics
-

Common Tasks

Add a New Feature Page

TypeScript

```
// 1. Create page in client/src/pages/NewFeature.tsx
export default function NewFeature() {
  return <div>New Feature</div>;
}

// 2. Add route in client/src/App.tsx
<Route path="/new-feature" component={NewFeature} />

// 3. Add navigation in DashboardLayout.tsx
{ label: "New Feature", href: "/new-feature", icon: IconComponent }
```

Add a New tRPC Procedure

TypeScript

```
// In server/routers.ts
export const appRouter = router({
  feature: router({
    getData: protectedProcedure.query(async ({ ctx }) => {
      return await db.query.someTable.findMany();
    }),

    updateData: protectedProcedure
      .input(z.object({ id: z.string(), name: z.string() }))
      .mutation(async ({ input, ctx }) => {
        return await db.update(someTable).set(input);
      })
  })
});
```

```
    }},  
  }},  
});
```

Add a Database Table

TypeScript

```
// 1. Update drizzle/schema.ts  
export const newTable = mysqlTable("new_table", {  
  id: int("id").autoincrement().primaryKey(),  
  name: text("name"),  
  createdAt: timestamp("createdAt").defaultNow(),  
});  
  
// 2. Generate migration  
pnpm drizzle-kit generate  
  
// 3. Apply migration  
pnpm drizzle-kit migrate
```

Troubleshooting

Port Already in Use

Bash

```
# Kill process on port 3000  
lsof -ti:3000 | xargs kill -9  
  
# Or use different port  
PORT=3001 pnpm dev
```

Database Connection Error

Bash

```
# Check DATABASE_URL in .env.local  
# Verify MySQL is running  
mysql -u root -p -e "SELECT 1"
```

```
# Test connection
pnpm drizzle-kit generate
```

WebSocket Connection Failed

Bash

```
# Check WebSocket server is running
# Verify ws://localhost:3000/ws is accessible
# Check browser console for errors
```

Build Errors

Bash

```
# Clear cache
rm -rf node_modules .next dist
pnpm install
pnpm build
```

Documentation

- **README.md** - Project overview
- **ADVANCED_FEATURES_GUIDE.md** - Feature implementation guide
- **SKYCOIN444_V10_SYSTEM_DESIGN.pdf** - Architecture & design
- **SKYCOIN444_V10_OFFICIAL_BETA_V4_README.md** - Full documentation

Next Steps

1. **Extract & Setup** - Follow Quick Start above
2. **Explore Features** - Navigate through all 18 pages
3. **Customize** - Modify colors, text, and branding
4. **Add Features** - Implement advanced features from guide
5. **Deploy** - Push to production

Support

- **Issues** - Check GitHub Issues
 - **Docs** - Read documentation files
 - **Community** - Join Discord server
